LOCATION
Kusunti Height, Lalitpur, Nepal

EDUCATION

Bachelor of Computer Engineering
Pokhara University
2079 B.S. – Present

NEB +2
BlueBird College
2079 B.S.

Secondary Education Examination (SEE)
Nava Jana Jagaran Higher Secondary School
2077 B.S.

SKILLS

DEVELOPMENT
JavaScript · Node.js · REST APIs · Vite · MongoDB · Redis

DEVOPS & SECURITY
Docker · Docker Compose · Nginx · GitHub Actions · Gitleaks · JWT, CSRF & CORS · Network segmentation · Container hardening

TOOLS
Git & GitHub · VS Code · MS Office

IT & SUPPORT
Troubleshooting · System backups · Data entry & file management · Hardware/software monitoring

PROFESSIONAL
Teaching · Lesson planning · Communication · Digital literacy training

LANGUAGES

English · Nepali · Hindi

PROFESSIONAL SUMMARY

Computer Engineering student at Pokhara University with hands-on experience teaching computer studies and running school IT systems. Builds and deploys full-stack web applications — most recently a Docker-based platform with layered security controls including network segmentation, hardened containers, token-based authentication and automated secret scanning. Seeking an entry-level role in IT support, web development or security operations.

PROFESSIONAL EXPERIENCE

Computer Teacher 2025 – 2026
Bright Scheme Eng. Boarding School

- Taught computer studies across multiple grade levels, covering MS Office, internet use and basic programming.
- Designed lesson plans and teaching materials, and ran classroom assessments to track student progress.
- Built students' digital literacy, problem-solving skills and responsible technology habits.

Computer Operator 2025 – 2026
Bright Scheme Eng. Boarding School

- Operated and maintained school computer systems, keeping daily operations running with minimal downtime.
- Handled data entry, file management and system backups with accuracy and efficiency.
- Monitored hardware and software performance and troubleshoot technical issues to maintain productivity.
- Supported staff with IT tasks including printing, scanning and document formatting.

PROJECTS

SOC Portfolio — Security-Hardened Full-Stack Web Application

github.com/Sandip-Sec0922/My-portfolio

Node.js · Vite · MongoDB · Redis · Nginx · Docker Compose · GitHub Actions

- Containerised a multi-service stack with Docker Compose: an Nginx reverse proxy load-balancing three Node.js API replicas, with health checks and automatic failover.
- Segmented the architecture into frontend, backend and data networks; the database tier runs on an internal network with no internet egress to limit the impact of a compromise.
- Hardened every container: non-root users, read-only filesystems, all Linux capabilities dropped and no-new-privileges enforced; MongoDB runs with authentication and Redis is password-protected.
- Built authentication around JWT access/refresh tokens with a Redis-backed token blacklist, plus CSRF protection, CORS allow-listing and Cloudflare Turnstile bot protection.
- Added automated quality and security checks — unit tests, linting, GitHub Actions workflows and Gitleaks secret scanning — and integrated the GitHub API and SMTP email notifications.

Automated Gradesheet / Marksheet Generator

Application that automates the preparation of student gradesheets and marksheets, reducing manual calculation and errors.

E-Commerce Web Application

Web-based online store covering product browsing and ordering.

Salon Management Dashboard & Booking Platform

Admin dashboard and online appointment-booking platform for managing salon services and customers.
